SUBCELLULAR LOCATION: Integral membrane protein.
TISSUB SPECIFICITY: Uniquely localized in a subset of small dorsal root and trigeminal sensory neurons.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     . Neurosci. 5:201-209(2002).
FUNCTION: Orphan receptor. Probably involved nociceptive neurons. May regulate nociceptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mas subfamily.

nociceptive neurons. May regulate nociceptor function and/or development, including the sensation or modulation of pain. Cortistatin-14 seems to be a high potency ligand at this receptor. Cortistatin has several biological functions including roles in sleep regulation locomotor activity, and cortical function. In receptor-expressing cells, cortistatin-stimulated increases in

SUECELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Has a limited expression pro
peripheral and within the central nervous system
levels in dorsal root ganglion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mas subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIMILARITY: Belongs to family 1 of G-protein coupled receptors

FUNCTION: Orphan receptor. May be a receptor for RFamide-family neuropeptides such as NPFF and NPAF, which are analysesic in vivo May regulate nociceptor function and/or development, including t sensation or modulation of pain.
SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Expressed in a subset of sensory neurons that includes nociceptors. Expressed in the subclass of nonpeptidergic sensory neurons that are IB4(+) and VR1(-).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 124 GLSMLSAISTERCLS 138

                     May regulate nociceptor function and/or development, including the sensation or modulation of pain (By similarity).
SUBCELLULAR LOCATION: Integral membrane protectin.
TISSUE SPECIFICITY: Expressed in a subset of sensory neurons that includes nociceptors. Expressed in the subclass of nonpeptidergic sensory neurons that are IB4(+) and VR1(-).
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                FUNCTION: Orphan receptor. May be a receptor for RFamide-family neuropeptides such as NPFF and NPAF, which are analgesic in viv

                                   FUNCTION: Orphan receptor. May be a receptor for RFamide-family neuropeptides such as NPFF and NPAF, which are analgesic in vivo. May regulate nociceptor function and/or development, including the sensation or modulation of pain (By similarity).

SUBCELULIAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: Expressed in a subset of sensory neurons that includes nociceptors. Expressed in the subclass of nonpeptidergic sensory neurons that are IB4(+) and VR1(-).
                  includes nociceptors. Exp

FUNCTION: Orphan receptor. May be a receptor for RPamide-family neuropeptides such as NPFF and NPAF, which are analgesic in vivo May regulate nocliceptor function and/or development, including tsensation or modulation of pain.
SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Expressed in a subset of sensory neurons that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MOUSE

Sequence 6, Application US/09254227A

| Patent No. 6696257
| GENERAL INFORMATION:
| APPLICANT: Ahmad, Sultan
| APPLICANT: Banville, Denis
| APPLICANT: Benville, Denis
| APPLICANT: Fortin, Yves
| APPLICANT: Lembo, Paola
| APPLICANT: Combonell, Dajan
| APPLICANT: Shi-Hsiang, Shen
| TITLE OF INVENTION: G Protein-Coupled Receptors from the Rat
| FILE REFERENCE: 81823/268117
| CURRENT APPLICATION NUMBER: US/09/254,227A
| CURRENT FILING DATE: 1999-03-03
| NUMBER OF SEQ ID NOS: 22
| SOFTWARE: Patentin version 3.0
| SEQ ID NO 6
| LENGTH: 969
| TYPE: DNA
| ORGANISM: Homo sapiens

Sequence 3, Application US/09867570

Publication No. US20040076951A1

GENERAL INFORMATION:
APPLICANT: WEI, Ming-Hui et al.
TITLE OF INVENTION: ISOLATED HUMAN G-PROTEIN COUPLED
TITLE OF INVENTION: RECEPTORS, NUCLEIC ACID MCLECULES ENCODING HUMA
TITLE OF INVENTION: PROTEINS, AND USES THEREOF
FILE REPERENCE: CL000900-CIP
CURRENT APPLICATION NUMBER: US/09/867,570
CURRENT PAPLICATION NUMBER: 09/695,045
PRIOR APPLICATION NUMBER: 09/695,045
PRIOR APPLICATION NUMBER: 09/695,045
PRIOR FILING DATE: 2000-10-25

NUMBER: OF SEQ ID NOS: 4
SOPTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 3
LENGTH: 8622
TYPE: DNA
ORGANISM: Human
